#### FIFO PAGE REPLACEMENT

### Aim:

To find out the number of page faults that occur using First-in First-out (FIFO) page replacement technique.

## **Algorithm:**

- 1. Declare the size with respect to page length
- 2. Check the need of replacement from the page to memory
- 3. Check the need of replacement from old page to new page in memory 4. Form a queue to hold all pages
- 5. Insert the page require memory into the queue
- 6. Check for bad replacement and page fault
- 7. Get the number of processes to be inserted
- 8. Display the values

# **Program Code:**

```
#include <stdio.h>
int main() {
    int referenceString[50], frames[10], n, frameSize;
    int i, j, k, pageFaults = 0, isHit, nextToReplace = 0;

    printf("Enter the size of reference string: ");
    scanf("%d", &n);

for (i = 0; i < n; i++) {
    printf("Enter [%d] : ", i + 1);
    scanf("%d", &referenceString[i]);
    }

    printf("Enter page frame size : ");
    scanf("%d", &frameSize);

for (i = 0; i < frameSize; i++) {
    frames[i] = -1; // Initialize frames as empty
    }

    printf("\n");</pre>
```

Guru sai Charan.D 231901501

```
for (i = 0; i < n; i++) {
       isHit = 0;
       // Check if the page is already in memory
       for (j = 0; j < \text{frameSize}; j++) {
       if (frames[j] == referenceString[i]) {
               isHit = 1;
               break;
       }
       }
       if (!isHit) {
       // Replace the oldest page (FIFO)
       frames[nextToReplace] = referenceString[i];
       nextToReplace = (nextToReplace + 1) % frameSize;
       pageFaults++;
       // Print memory contents
       printf("%d -> ", referenceString[i]);
       for (k = 0; k < frameSize; k++) {
               if (frames[k] != -1)
               printf("%d", frames[k]);
               else
               printf("- ");
       }
       printf("\n");
       } else {
       printf("%d -> No Page Fault\n", referenceString[i]);
       }
       }
       printf("\nTotal page faults: %d\n", pageFaults);
       return 0;
}
```

## **OUTPUT:**

Guru sai Charan.D 231901501

```
Enter the size of reference string: 10
Enter [1] : 3
Enter [2] : 2
Enter [3] : 6
Enter [4] : 8
Enter [5] : 3
Enter [6] : 4
Enter [7] : 1
Enter [8]: 2
Enter [9] : 2
Enter [10] : 6
Enter page frame size : 3
3 \rightarrow 3 - -
8 \rightarrow 826
3 \rightarrow 8 \ 3 \ 6
4 -> 8 3 4
1 \rightarrow 1 3 4
2 \rightarrow 1 2 4
2 → No Page Fault
6 \rightarrow 126
Total page faults: 9
```

# **RESULT:**

Hence, page faults that occur using First-in First-out (FIFO) page replacement technique has been found.
